CORE: (*THIS COULD POSSIBLE AFFECT THE MCC DASHBOARD*)		
DSIO4 is too big and I will split it up at a later date.		
<ul style="list-style-type: none">- Previously the DSIO SAVE OBSERVATION allowed the user to set any piece at will – this modification now forces validation on the PIEN and BIEN input parameters. In the case of this RPC, BIEN is a count rather than the IEN of the fetus/baby file, and setting it to the observation requires either a pregnancy to already be set or in the process of being set. Likewise, you cannot delete a pregnancy when a BIEN exists...- The DSIO FETUS/BABY file changed and entries are added through DSIO SAVE OBSERVATION. A fetus/baby entry is unique by count, patient, and pregnancy.- DSIO SAVE NON VA ENTITY has been rewritten to be more like the other (DSIO SAVE PERSON) RPCs.<ul style="list-style-type: none">o Input Parameter are now IEN, NAME, TYP, ACT, PCON, ADDR, and PHONE where ADDR and PHONE are lists used like DSIO SAVE PERSON with the exception of FAX as the fourth entry for PHONE.- DSIO VPR GET PATIENT DATA – family – has been updated to work with the new Father of Fetus structure- A new API was created to aid in deleting null values passed by save type RPCs – all save type RPCs are consequently affected.- DSIO IHE SAVE fixed and updated. It now has an IEN parameter.
