- New File: DSIO IHE DOCUMENT
- New File: DSIO IHE DOCUMENT TYPE
- New RPC: DSIO IHE SAVE
- RPCs registered to the DSIO GUI CONTEXT – DSIO IHE SAVE, TIU AUTHORIZATION

Original Request:

I'm starting to work on the IHE Outbound Content User Story. We'll need VistA work to complete that story. I think it's a new file and an RPC to save entries.

For the RPC, I'd like to be able to save the data using the following parameters.

Patient Dfn
In/Out
Date/Time Creation

Date/Time Import/Export
Document Type (APHP, APS, APL, APE, MDS, NDS, PPVS, XDR-I)
Document Title
Sending Facilty/Provider
Intended Recipient
Document Content (XML)

Resolution:
The RPC saves the 9 input parameters to a file – everything is required. Since there is not much information on exactly what the data is and if it is to be something already on the system there is very little validation and values may be treated as free text instead of pointers. The current design of the file is flat since its use is unknown and since it is flat a key was made with the assumption that a combination of Patient DFN, Date/Time Import/Export, and In/Out would be unique.

Components:
